WHAT IT IS

PetroConnect is a **closed marketplace** exclusively for verified employees of Kuwait's nine K-Companies (KPC, KOC, KNPC, KIPIC, PIC, KGOC, KUFPEC, KOTC, KAFCO, Q8). Registration is gated by corporate email at both the UI and database layers — no public signups, no anonymous accounts. The full trade loop is implemented: list → chat → structured offer → reserve → payment → mark sold → post-trade review.

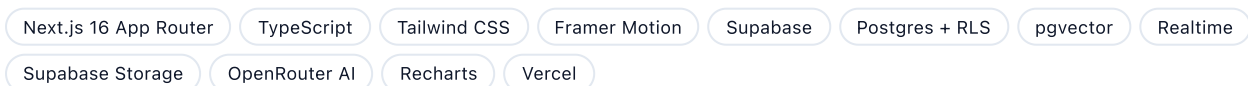

CORE FEATURES

- 1 Verified-only access**
Corporate-email gate enforced by Postgres trigger. Anonymous role: zero reach.
- 2 Marketplace**
Products, services, service-requests with full-text + semantic search and filters.
- 3 AI listing assistant**
Auto title, description, category, and fair-price suggestions powered by OpenRouter.
- 4 Duplicate & fraud guard**
1536-dim embeddings via pgvector + a JSON-strict LLM fraud classifier.
- 5 Realtime chat**
Supabase Realtime, structured Offer cards with Accept/Decline, optimistic updates.
- 6 AI message moderation**
Every message is scanned post-send; flagged messages surface in the admin queue.
- 7 Trust System v2**
Composite score → 4 tiers (Newcomer · Trusted · Pro · Elite) with animated badges.
- 8 Payment workflow**
Mock provider works today; MyFatoorah / Tap / KNET adapters ready to plug in.
- 9 Admin command center**
Health gauge, revenue charts, transaction log, AI-flagged-message moderation.
- 10 Command palette (⌘K)**
Global search across listings, members, and routes with keyboard navigation.

HOW TO EVALUATE (~5 MINUTES)

- 1 Open the live platform — review the landing page (animated stats, trust deep-dive) and the **/trust** page.
- 2 Sign in as **Ahmed** (member). Open any listing, press **⌘K** for the global command palette.
- 3 Click **Message seller** → use the tag icon in the composer to send a structured offer (e.g. 8000 KWD).
- 4 Switch to **Fatma** (admin) → open **/chat** → **Accept** Ahmed's offer (listing auto-reserves).
- 5 Back as Ahmed → click **Proceed to payment** → confirm → land on **/payment/success** with full receipt.
- 6 As Fatma → visit **/admin** → Marketplace Health gauge, KPIs, revenue charts, payments table, moderation queue.

TECH STACK

Database: 15 tables with full RLS, 9 RPCs, 3 triggers, pgvector embeddings, FTS via tsvector, full audit log on payments. **AI:** 9 endpoints (titles, descriptions, categories, fraud, search, recommendations, price, duplicate detection, message moderation).
